SIGN ORDERING INSTRUCTIONS

Send your order in an email with the text you would like on your signs, the number of each sign wanted, with the size plates you would like, to us at **solarsigns@plantsigns.com**. If you do not hear back from us within 2 days, please call us at (801) 900-1182. Word or Excel files are fine. Or fax your order to us at (801) 893-9059. We will then review your order and be back in touch with a quote. Payment may be made by check, credit card (VISA or MasterCard) or PayPal. Please allow 2 weeks to process your order.

The default sign plate backing is weather resistant adhesive. Please specify if you would rather have a small piece of 2-sided tape on the back or no backing at all. Some installers want a small piece of 2-sided tape to temporarily hold the sign in place while a few drops of epoxy set up to permanently hold the sign in place. Or we can drill holes as needed.

History of our company

Plant Signs started in 1996 in California. We had a small palm tree nursery (South Coast Palms), and every time we grew a new variety of palm or cycad, we would plant a few in our garden. After a number of years we had over 250 different kinds of plants in our garden, and we needed a way to identify them. Talking to others revealed many people were looking for a way to label the plants in their gardens as well. Thus Plant Signs was born. We have been making garden signs for customers since that time. We have over 1,000 customers throughout the United States (and a few foreign countries). In 2013 we moved to Utah where all our kids had settled. We recently had 20 solar panels installed on our house. The installers saw us making our garden signs and asked if we could make their solar panel warning signs for them. The rest is history.
